INTRODUCTION

Tour Management system is a dynamic program for tourism business. It is also called travel technology solution for agencies & tour operation. Nearly Everyone goes on a vacation for this 'a Tourism management system' would play a vital role in planning the perfect trip. The tourism management system allows the user of the system access all the details such as location, events, etc. The main purpose is to help tourism companies to manage customer and hotels etc. The system can also be used for both professional and business trips

ABSTRACT

Simple Tour Ticket Booking System is based on the concept of booking tour tickets. There's no login system available for this system, the user can freely use its feature. This mini project contains limited features, but the essential one.

Talking about the features of this simple system, the user can book tickets. For this, the user has to select a tour package, enter the number of passengers and customer details such as name, vaccinated or not and age. After this, the booking is done. The user can take a screenshot of the confirmation page for future reference. The last feature of this project is about canceling the tickets.

The system does not create an external file to store the user's data permanently. This system is in C Programming Language and different variables, strings h

AIM

In the existing system, each task is carried out manually and processing is also a tedious job. In previous system travelers were maintaining time table details manually in pen and paper, which was time taking and costly. The travelers is not able to achieve its need in time and also the results may not accurate. So the proposed system is designed to be more efficient than the manual system. It invokes all base tasks that are now carried out manually, such as the forms transactions and reports which is added advantage. The proposed system is completely computer-based application. Thousands of records can searched and displayed without taking any significant time.
